# Introduction

## What does it do?

MOOX Bootstrap Responsive is the Core-Extension for MOOX. MOOX is a set of Extensions for the TYPO3 CMS. While this TYPO3 Extension provides Responsive Page-Layouts and Content Elements using Bootstrap, it also can be easily extended by other MOOX-Extensions like News & Blog, jQuery Effects and more.

Visit <http://www.moox.org/documentation> for full documentation.

## Screenshots

Frontend Output of MOOX Bootstrap Responsive with additional Sequence Slider showing the responsive views of the same website.

## Sponsors

This Extension is developed by DCN GmbH (<http://www.dcn.de>). There are now sponsors yet. If you want to donate us, contact [moox@dcn.de](mailto:moox@dcn.de) and we will add you here and on our sponsor page <http://www.moox.org/en/partner/sponsors>

# Users manual

Choose a free or commercial MOOX Template (<http://www.moox.org/templates>) on a fresh TYPO3-Installation.

OR

Install MOOX Template Builder (`moox_template_builder`) to create an own responsive website template with MOOX.

In both ways `moox_core` and all needed MOOX Extensions will be installed automatically.

OR

Install `moox_core` without any template (FE-Output will be ugly of course).

The MOOX Core-Extension will ...

- ... install the Extension - VHS: Fluid View Helpers (`vhs`)
- ... install the Extension - Flux: Fluid Flexforms (`flux`)
- ... install the Extension - Fluid Pages Engine (`fluidpages`)
- ... install the Extension - Fluid Content Engine (`fluidcontent`)
- ... install the Extension - RealURL: speaking paths for TYPO3 (`realurl`)
- ... create a `.htaccess`-File (for RealURL and optional Static File Cache)
- ... create a `robots.txt` File (Standard-configured for search engines)
- ... copy some folders and contents to the `fileadmin`-directory (CSS, Images)
- ... automatically configure RealURL

After installation, there are a few steps to get MOOX running. Please refer to the Configuration section for more information.

Alternatively you may order a ready2run platform on <http://www.moox.org/services/hosting>

# Administration

There are no administration tasks for MOOX.

# Configuration

If you did not import some Pages you should start with a rootpage and include the static templates in following order:

MOOX Bootstrap Responsive (moox\_core)

MOOX Main Extensions (like moox\_news)

MOOX Content Extensions (like moox\_sequence)

MOOX Template (extension\_key\_of\_template)

Now you must configure the Domain and Page Title via Constants Editor (you should also do this on root-level). There are further constants to configure MOOX, but these two are the only necessary configuration options.

You may add one or two Domain Records on you Root-Page to get your project running with and without the www-prefix.

Now select a Page Layout on Root-level and start with your content.

Have Fun!

Alternatively you may order a ready2run platform on <http://www.moox.org/services/hosting>

# Tutorial

Visit <http://www.moox.org/documentation> for full documentation.

## Known problems

MOOX should only be installed on new TYPO3-plattforms as it is incompatible to following extensions:

- all templating Extensions like Templavoila etc.
- css\_styled\_content (will be automatically deinstalled by MOOX Setup)
- all older pibase-Extensions
- most Extensions that generate own FE-Output

Please refer to the Extensions Github Repository and check the issues for more information:

[https://github.com/dcngmbh/moox\\_core/issues](https://github.com/dcngmbh/moox_core/issues)

## To-Do list

Please refer to our TYPO3 Forge Project Page:

[https://forge.typo3.org/projects/extension-moox\\_core](https://forge.typo3.org/projects/extension-moox_core)

# ChangeLog
